

CITRIX READY PARTNER

Continuous Behavioral Authentication™ for a dynamic level of assurance

Our solution allows organizations to protect Citrix Workspace with advanced machine learning using Accepttto's Cognitive Continuous Authentication™. Proactively increase authentication requirements for unprecedented or unexpected access attempts—while simultaneously reduce friction and enhance productivity for well-behaved users.

Problem: Traditional usernames and passwords represent real vulnerabilities and **password resets are increasingly costly for help desks.**

Multi-factor authentication has become a more robust requirement, but not all multifactor solutions convey the same level of security. Most schemes treat all applications and users equally, independent of circumstance, location, or access method. In addition, phones, tokens, PINs, personal information, and even biometrics used as authentication factors can be stolen and used illicitly. This is why Continuous Authentication is a necessity for any organization.

Accepttto's eGuardian® offers risk-based assessment to authorize or deny access to resources such as websites, databases, or financial transactions.

Any resource that is subject to authentication can be protected. For instance, eGuardian® would be able to detect a fraudulent access attempt with a computer served by an ISP located in the U.K., and a phone simultaneously on a mobile network in the United States, even if other factors appeared normal. With network forensics, eGuardian® also provides an audit trail of user actions, along with application behavior and transactions. The audit trail can be used to fine tune policies dependent on the criticality of a resource and the risk level of user behavior, device characteristics, and associated transactions. The auditing capability can work in a stand alone fashion, or it can be integrated with the ItsMe™ client authenticator to implement multi-factor authentication. software can assess whether a given access attempt is legitimate, based on it's context. The software performs continuous monitoring of user behavior and traffic, gathering intelligence from multiple external sources. Accepttto's eGuardian® works with NetScaler Unified Gateway™ via the RADIUS protocol.

Accepttto's eGuardian® platform is a verified and compatible solution within the Citrix Ready partner program. The partner designation is awarded to third-party solutions that have successfully met test criteria set by Citrix and provides added confidence to Citrix customer's in the compatibility of the joint solution.

Solution

eGuardian® Intelligence Authentication for Citrix

Accepttto's eGuardian uses sophisticated machine learning to continuously monitor user behavior. The software can assess whether a given access attempt is legitimate, based on it's context. The software performs continuous monitoring of user behavior and traffic, gathering intelligence from multiple external sources.

Acceptto Solutions

Intelligent Multi-Factor Authentication

Employees hate using passwords as much as you hate managing password vulnerabilities. More passwords and tokens lead to greater security risk, fatigue, and cost. It's time to get rid of them for good.

Device Trust

Acceptto Device Trust solution enables passwordless Desktop SSO for Windows and Mac workstations and measures the security hygiene of devices, tracks who is accessing which company applications, and eliminates costly helpdesk support calls.

Zero Trust Identity (CIAM)

You need to know that your customers are who they say they are; customers don't want to jump through hoops to prove it and they want you to keep their credentials safe.

FIDO Solution

FIDO Certified program provides assurance of product compliance to roll out FIDO Authentication using Acceptto's enterprise identity authentication security solution.

Why Acceptto

Enable Frictionless Productivity

Acceptto facilitates an incredible, frictionless secure authentication user experience without MFA fatigue all your web, mobile, cloud or IoT applications.

Correlate Audit Logs & Threat Intel in Real-time

Acceptto eliminates the reliance on weak and outdated controls by incorporating multi-modal telemetry into our solution. We utilize contextual, behavior-based credentials that are virtually impossible to replicate, tamper with, or spoof. This is our revolutionary Biobehavioral® approach to identity access management.

Instantly Prevent Credential Stuffing

Acceptto renders credential stuffing benign using passwordless risk-based authentication. Our services drastically reduce the threat surface for ATO breaches using smart MFA.

Dramatically Reduce Cost of Operations

Acceptto eliminates the need for passwords, thereby eliminating the need for time-consuming password resets, and help-desk costs.

Orchestrate Dynamic Authentication

Acceptto monitors user context and behavior based on a simple but powerful set of configurable policies that drive dynamic risk-based scoring of authentication requirements. This, in turn, adapts to user behavior, attributes and the ecosystem of associated devices and resources.

Customize, Integrate and Scale Efficiently

Acceptto provides an out-of-the-box solution for all enterprise cloud or on-premise applications, certified Webauthn FIDO servers, Mobile SDKs, and REST APIs for scale, extensibility and visibility into the IT ecosystem.

About Acceptto

Acceptto is on a mission to make passwords obsolete, and account takeovers impossible.

Acceptto's intelligent Passwordless Continuous Authentication™ technology analyzes user identity and uses behavioral modeling to infer whether a user is a threat before authentication, during authentication, and post-authorization.

Identity is more than passwords and tokens. Identity is defined by authentic behavior. Companies use Acceptto to thwart fraudsters and create seamless, secure user experiences for employees, partners and customers. The company is headquartered in Portland, OR with offices in Washington, DC, Lisbon, Portugal, and Vancouver, Canada.
